Clean Trough

Elmore Field Days
6 to 8 October 2026

# Clean water without the daily scrub.

SATURN flushes and refills itself on a schedule you set from your phone. You get the time back.

## Winner: NAB Agribusiness Award of Excellence 2026

Australian National Field Days, Borenore NSW, October 2026
(awarded to manufacturer Wispac Australia for the Saturn Smart Livestock Water System)

**SATURN** SATURN self-flushing livestock water trough

Designed in Victoria. Assembled in Australia from imported components.

## Try it on your own farm, free for 90 days.

**Talk to Joe.**

cleantrough.com.au/trial

# One flush, 82 seconds.

## A trough fouls in days.

Mud, algae and feed settle on the bottom. Stock drink less from warm, stagnant water, and someone has to clean it out again.

> **"Troughs should be completely emptied, cleaned and re-filled every 1 to 2 days."**
>
> Agriculture Victoria, Water supply in stock containment areas

**1** **Water comes in at the control unit.**

**2** **A surge pushes the sediment along the floor.**

**3** **Dirty water drains out the far end.**

## No scrubbing.

The flush does the cleaning. You check the trough, you don't tip it out and scrub it.

## Hours back every week.

Ten minutes a trough, once a day, is about 61 hours a year. For each trough.

## Away for a few days?

It keeps flushing on schedule and the float keeps it full, as long as your water supply is on.

## Scan to watch the flush.

Watch the 82-second demonstration on your phone.

Watch the video

# Built for daily use.

SATURN in green and in black

## Set from your phone.

Choose how often it flushes, over Bluetooth, standing next to the trough.

## Water stays on.

The float valve is mechanical. If the controller battery goes flat, stock still have water. Only the automatic flush stops.

## Solar charged.

Kept charged by its own solar panel. The app shows the battery level. If low, one USB-C charge lasts 12+ months.

## Moves with your stock.

About 30 minutes to install. Can be relocated between paddocks as stock rotate.

## BODY

Construction
**UV-stabilised, rotomoulded LLDPE**
Outer dimensions
**2,225 mm (L) x 430 mm (W) x 350 mm (D)**
Drinking length
**1,950 mm**
Trough volume
**50 litres**

(manufacturer information)

## WATER

Operating pressure
**200 to 1,000 kPa (2 to 10 bar)**
Refill
**mechanical float valve, no power needed**
Water per flush
**approximately 60 litres**
Suggested flushes
**1 to 2 a day**

Inlet: 1-inch plastic pipe. Outlet: 2-inch, can stay unconnected for the trial.

## CONTROL

Flush control
**Bluetooth, from your smartphone**
Power
**battery, solar or USB-C charged**
Colours
**green or black**
Warranty
**2 years on spare parts**

# $2,123

## a year, one trough.

One trough cleaned once a day, ten minutes a time, with your labour at $35 an hour. In summer it can be twice a day. Your numbers will be different.

**7 × 10 ÷ 60 × 52 × $35 = $2,123.33**

Clean Trough

# Try it on your own farm, free for 90 days.

We install a trough beside your existing water, which stays available the whole trial. At the end you decide. Trials are available in Victoria.

## 1 Apply.

Tell us about your operation. Joe will call you to arrange a time to install.

## 2 Install and use.

About 30 minutes to install. Record a few things once a week on a simple sheet we provide.

## 3 Decide.

Keep it at a trial discount, or we collect it at no cost to you.

## How the trial is judged

(agreed in writing before it starts)

1. No more than one fault during the trial.
2. At least 30 minutes a week of hand cleaning saved.
3. Water use no more than 10% higher than before.
4. Water stays clean enough that stock drink normally.

## Stock agents, rural merchandise reps and installers.

We are looking for regional agents to introduce SATURN to feedlots, containment areas and dairies. We provide demonstration units, product materials and training, plus support with trials and installation questions. Terms are discussed one to one. Call Joe.

## Talk to Joe.
